

1. Download the latest version of the BookBeach Print Bot into the computer that have all printers intalled.
2. Extract the zip file in any directory that you want in your pc.

Name	Date modified	Type	Size
BookBeachPrintBot.zip	12/12/2021 8:39 PM	WinRAR ZIP archive	3,192 KB

3. Locate the file BookBeachPrintBot.exe from the extract files

BookBeachPrintBot.exe	12/12/2021 8:38 PM	Application	346 KB
-----------------------	--------------------	-------------	--------

4. Make sure that the directory and the files have the administrator privileges to run.
5. Create a printer or printers from your web admin site , under Company/ Company Printers

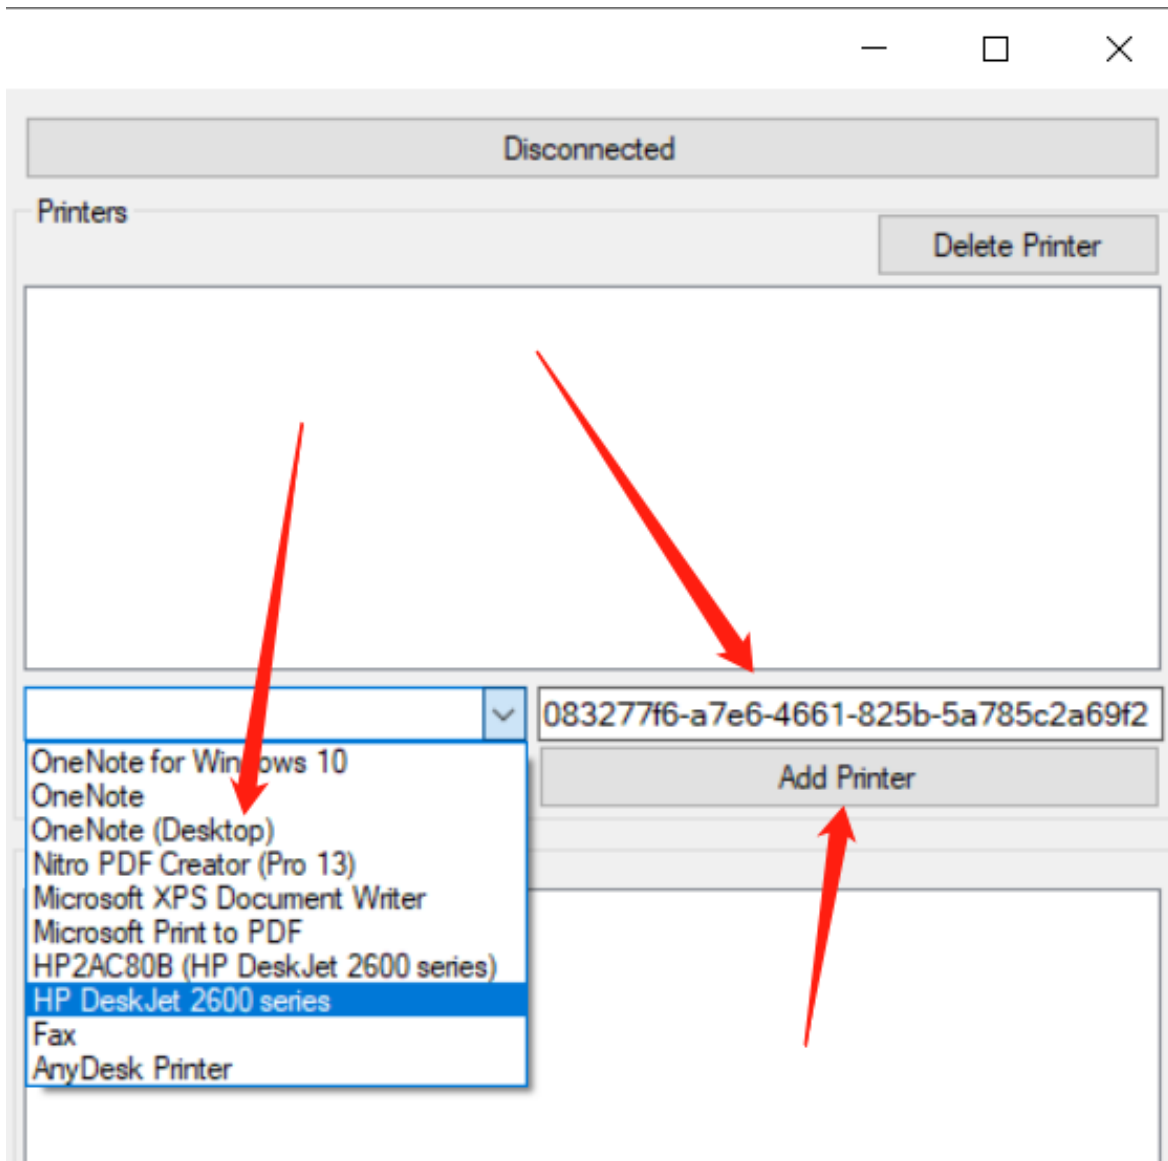

6. After creation of the printer, copy the "PrinterID" field that we are going to add into the BookBeach Printer Bot Application

Edit	Delete	PrinterID	Printer Name	deviceIP	Token	LastSocketID	StatusOnline	LastLogin
		083277f6-a7e6-4661-825b-5a785c2a69f2	test printer				False	

Add New

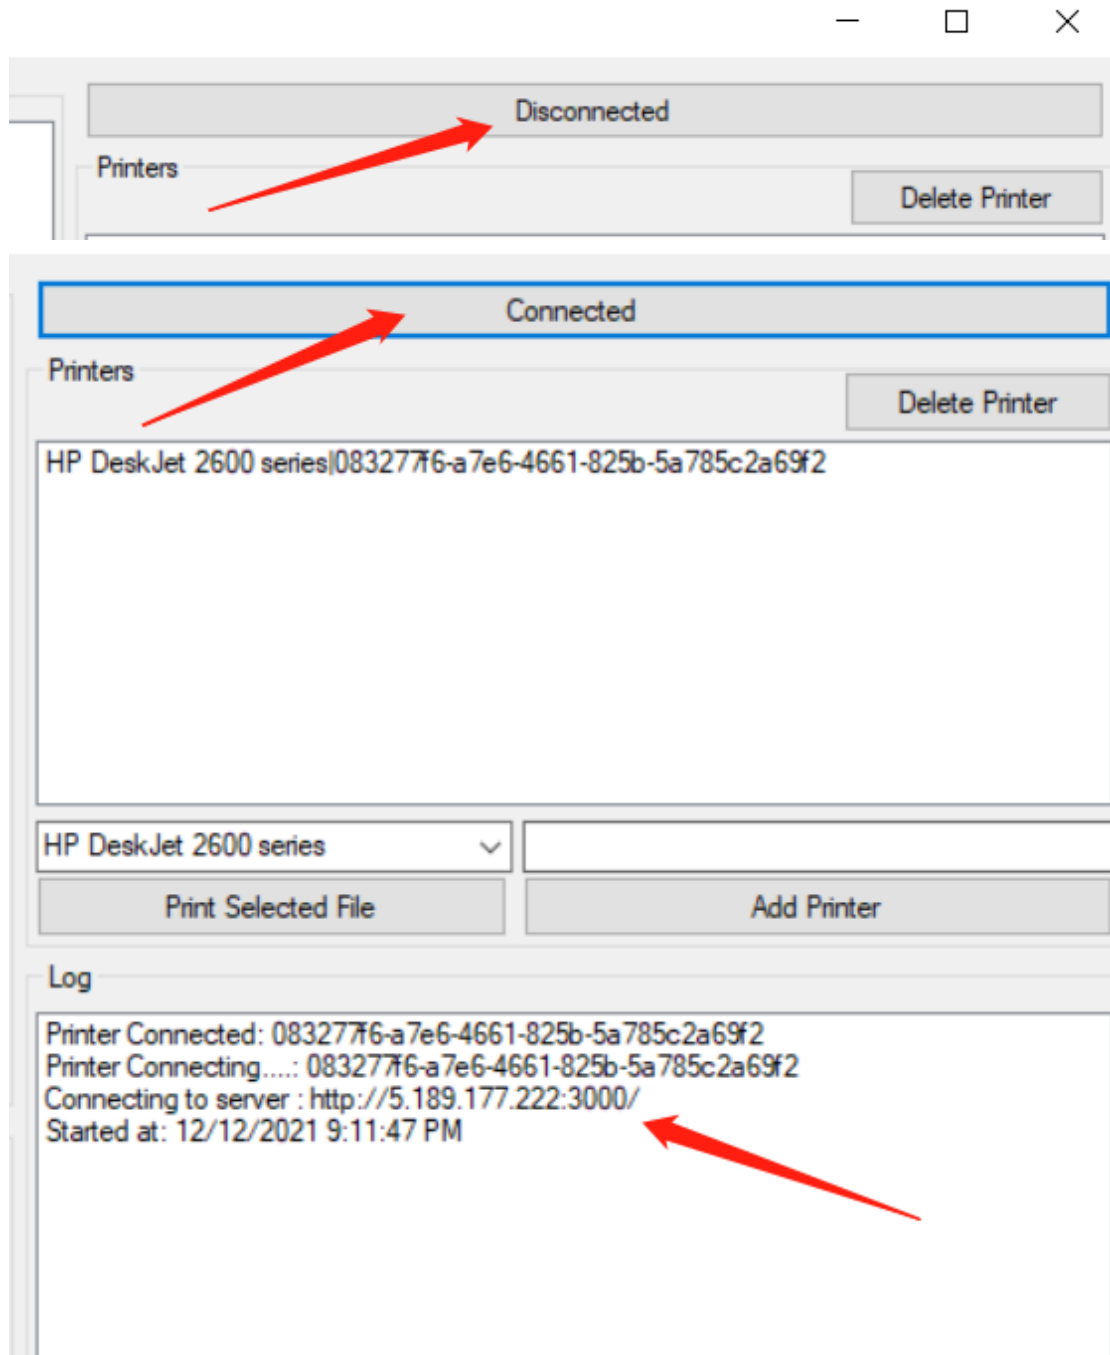

7. Now open the windows application BookBeachPrintBot.exe, and first step is to add the printers into the application. Select from the dropdown list the printer that you want to print your orders and write the PrinterID that you find from the web (step 6), and click "Add Printer"

8. After you add the printer(s), you click “Disconnected”, so you can connect your printers to the system

Then your printer(s) is ready to receive orders from the BookBeach System.
